

Record High for the Classic - MOBA has Sold this Year's 1,000th MOBA-matic II

MOBA Mobile Automation AG has sold this year's 1,000th MOBA-matic II. As the successor to the proven MOBA-matic I, introduced into the market in 1991, it is the top selling leveling system for road construction. As the market leader it is today standardly installed on asphalt pavers of all leading machine manufacturers, such as Caterpillar, Volvo, Dynapac, Bomag, Vögele, RoadTec, Sany, Ammann and XCMG.

Limburg, October 12, 2016

Thanks to the wide range of compatible sensors, the MOBA-matic II is the right choice for any application, whether for highways, runways, roundabouts or parking lots. Connected sensors are detected automatically and are installed and configured very quickly. The system is compatible with any hydraulic system of a broad range of manufacturers and is thus particularly beneficial.

Countless features, such as the automatic mode, which allows a direct operation without pre-adjustments, support the uncomplicated handling. Perfect evenness is easily installed at the push of one button. Designed by ergonomics, numerous other elements maximize the system's user-friendliness. The concise 4-button design with a transreflective display enables a fast, intuitive on-site operation and thus saves time during asphalt installation. Soft keys, which are also easy to use with gloves, and the special night design make the handling in the rough construction day a pure joy.

After its market launch, the MOBA-matic quickly established itself as a pioneer system and has become indispensable in road construction. Begun as a compact solution for controlling the screed, it has become the de facto standard in road construction thanks to intensive further developments and innovations over the years. Combined with the 4-sensor solution Big Sonic-Ski, it is known as the most flexible, accurate and reliable leveling system for asphalt pavers. Its long-term success is due to intensive further developments. Even now its progress does not stand still. Remote support is a next essential step in the evolution of the connected construction site of the future.

MOBA Mobile Automation AG has been developing and manufacturing its MOBA-matic for more than 25 years. Thanks to many years of experience with a wide range of machines, an elaborate system has been developed, which is particularly convincing in harsh environments. Sophisticated features and robust heat and vibration resistant components combined with an ergonomic design make the MOBA-matic II the absolute must for any road construction project.
